SOLAR PANELS FOR INGS CHURCH

EXPRESS YOUR SUPPORT TO SUSTAIN THIS HISTORIC, PUBLIC, COMMUNITY AND FAITH SPACE FOR INGS and ITS WIDER COMMUNITY

I/we support the proposal for installation of solar panels at St Anne's Church, Ings, LA8 9PY*:

- it reduces the electricity **costs** making use of the Church affordable
- using the Church protects the fabric of the building, saving it from neglect thus protecting its architectural heritage
- the installation of solar panels on the south facing roof creates **minimal visual impact**, invisible for all who see St Anne's from the A591, and is completely removable, leaving no trace
- it supports St Anne's Church as an important, much-used and much-loved **community asset**, the only large public space in Ings
- generating low carbon energy to drive the existing heat-pump is an outstanding example of **sustainable development in action**
